INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/JP2004/012382

Box No. V		Reasoned statement under A rticle 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement			
1.	Statement				
	Novelty	(N)	Claims	1-7	YES
			Claims		NO NO
	Inventive step (I	ve step (IS)	Claims		YES
			Claims	1-7	NO NO
	Industri	al applicability (IA)	Claims	1-7	YES
			Claims		NO NO

2. Citations and explanations (Rule 70.7)

Document 1: JP 2001-64700 A (Kiresuto Kabushiki Kaisha), 13 March 2001

Document 2: 04-187788 A (Nihon Parkerizing Co., Ltd.), 06 July 1992

The inventions set forth in claims 1 to 7 do not involve an inventive step in the light of document 1 and document 2 cited in the international search report.

In the written response dated 27 June 2005, the applicant asserts that the abovementioned documents do not include any disclosure which indicates that HEDP exhibits a stability coefficient of 5.0 to 14.0 when reacted with Ca, and further asserts that the invention set forth in the present application is delimited as including ions that have been eluted from aluminum.

However, the description of the present application specifies that "it is preferable for the metal ions that exhibit a stability coefficient of 5.0 to 14.0 when reacted with an organic phosphoric acid or a salt thereof to be...calcium ions..." (paragraph [0015]), and does not set forth any other conditions for selecting ion species such said stability coefficient will fall within a range of 5.0 to 14.0; meanwhile, calcium ions are employed in the

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/JP2004/012382

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

invention that is disclosed in document 1. Such being the case, the calcium ions that are disclosed in document 1 can be said to exhibit a stability coefficient of 5.0 to 14.0 when reacted with an organic phosphoric acid or a salt thereof, like in the invention that is set forth in the present application.

In addition, claim 1 includes the disclosure "one specie of metal ion or two or more species of metal ions selected from among metal ions that exhibit a stability coefficient of 5.0 to 14.0," wherein the scope of said disclosure includes configurations in which only one specie of metal ion is selected from among the metal ions that exhibit a stability coefficient of 5.0 to 14.0; therefore, the scope of the invention that is set forth in claim 1 can be considered to include configurations that delimit only Ca ions, like the invention that is disclosed in document 1.

As a result, the abovementioned assertions by the applicant are not applicable. Consequently, the inventions that are set forth in claims 1 to 7 do not involve an inventive step for the reasons presented in the written opinion that was issued on 07 December 2004.
